Dear Hiring Team,

With **14+ years of experience** in **full-stack engineering** and **technical leadership**, I specialize in building scalable web and mobile applications using **React.js, Node.js, Python, and Azure**. My background spans **frontend architecture, full-stack development, performance optimization**, and enterprise solution delivery across **FinTech, Wealth Management, E-Commerce, and Enterprise platforms**.

At **UBS**, I lead development of the **Client Advisor Workbench**, a React-based wealth management platform serving **5,000+ advisors**, along with an internal **Admin Platform** supporting advisor data management. Across my career, I have delivered high-impact platforms including **Recruitment Central for Atlassian** and **Lennar Nova for Lennar**, while collaborating with global teams, mentoring engineers, and driving **engineering quality, scalability, and technical excellence**.

Alongside enterprise development, I actively work with **AI engineering workflows** and practical AI applications. I have built **local AI agents, RAG-based knowledge onboarding systems**, and **AI-powered data analysis utilities** using **Ollama-powered LLMs**, while integrating **Gemini and DeepSeek APIs** into custom applications. I also leverage **Cursor, Cline, Copilot, and local LLM tooling** to accelerate development, improve productivity, and enhance engineering workflows.

I would welcome the opportunity to discuss how my experience and technical background can contribute to your team.

Thank you for your consideration.

Best regards,

Vishwajeet Kondi
